---

Although Amman's climate generally supports solar power generation, certain environmental factors may occasionally impact efficiency levels. For instance, strong winds or heavy rain ...

Across the hillsides and outskirts of Jordan's capital city, Amman, olive orchards and grazing lands are increasingly interspersed with glittering rows of photovoltaic (PV) panels ...

These solar farms are located in Amman, al-Khalidiya, and in the Mafraq development area. They deliver electricity to the grid through the so-called wheeling process. The solar farms were built ...
