---

The application of antimony as a clarifying agent in solar photovoltaic glass will become the main driving force for demand growth in the next decade.

While float glass is most common in solar panels, patterned glass also contains antimony, a compound that improves solar glass efficiency but raises environmental and health concerns ...

This article explores a new process for extracting valuable antimony from the glass of solar panels, aimed at solving disposal challenges in the 2030s.

However, the composition of solar glass varies, especially concerning antimony (Sb) content, depending on the production method. ...
