What is an Uninterruptible Power Supply (UPS)? A UPS is a device that provides backup power to connected equipment during power interruptions or fluctuations. It ensures ...

When the main power fails, the UPS supplies power for a short time. This is its primary role. Additionally, UPS can correct power problems like voltage spikes, noise, and ...

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes.

A UPS or uninterruptible power supply uses batteries and supercapacitors to store electrical energy and delivers this stored electrical energy when the main input power supply fails.
