What is the potential of wind energy in Azerbaijan?

According to preliminary analysis, the total technical potential of wind energy in the Azerbaijani part of the Caspian Sea was estimated at 157 GW (35 GW in shallow water basins and 122 GW in deep water basins).

How windy is Azerbaijan?

Azerbaijan is relatively windy, especially along the Caspian Sea coast. According to the Ministry of Energy, the country has roughly 3 000 MW of technical and 800 MW of economic wind power potential. This economic potential could generate around 2.4 TWh and conserve approximately 1 Mt of conventional fuel, avoiding the corresponding CO<sub>2</sub> emissions.

What is Azerbaijan's energy potential?

According to the Ministry of Energy, the country's technical potential for small hydro is 520 MW, which could generate up to 3.2 TWh annually. Azerbaijan's Renewable Energy Agency under the Ministry of Energy (formerly SAARES) states that the country has up to 800 MW of geothermal energy potential.

How can Azerbaijan improve energy security?

Diversifying and improving the energy capacity of the country to ensure energy security. Azerbaijan has significant untapped renewable energy potential, as it is a relatively sunny and windy country, and it also has sizeable hydro, biomass and geothermal resources.

Azerbaijan and China have reached agreement on the construction of new solar and wind power plants in Azerbaijan and a battery energy storage system, the Azertag state

With the global cumulative wind power capacity surpassing the 1-terawatt (TW) mark last year, wind energy has entered an era of ...

With the global cumulative wind power capacity surpassing the 1-terawatt (TW) mark last year, wind energy has entered an era of accelerated growth, driven by the pivotal ...

This map shows the estimated technical potential for fixed and floating offshore wind in Azerbaijan in terms of installed power capacity in megawatts (MW) within 200 kilometers of the shoreline.
