Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

Why is Bangkok undergoing a wave of infrastructure upgrades?

Bangkok is undergoing a wave of infrastructure upgrades that promise to make daily life in the city more convenient, reliable, and enjoyable - especially for expats, digital nomads, and long-term visitors.

Are new mass transit lines easing Bangkok's traffic jams?

Bangkok's notorious traffic jams are getting some relief thanks to new mass transit lines that have come online recently. In 2023, two new rapid transit lines opened, dramatically expanding the city's rail network: the MRT Yellow Line and the MRT Pink Line.

How do cellular network operators shift to green practices?

Cellular network operators attempt to shift toward green practices using two main approaches. The first approach uses energy-efficient hardware to reduce the energy consumption of BSs at the equipment level and adopts economic power sources to feed these stations.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Bangkok is undergoing a wave of infrastructure upgrades that promise to make daily life in the city more convenient, reliable, and enjoyable - especially for expats, digital ...

Did you know a single communication base station failure can disrupt services for 5,000+ users? As global 5G deployments accelerate - with over 7 million base stations projected by 2025 - ...

Since establishment, we have done over 5,000 sites turnkey and maintenance of more than 1,500 sites of base stations all over Thailand. We are proud of the results of our achievement, we ...
