A comparison is made among different cooling strategies, including natural convection, forced convection, and SF33 coolant liquid cooling, under various discharge rates.

At the same time, it is necessary to ensure that the flow rate of the coolant is sufficient to meet the heat dissipation needs. Layout of cooling pipes: A reasonable pipe layout ...

In this paper, we proposed a thermal design method for compliant battery packs. The thermal design of the battery pack is divided into two key parts: the battery pack coupled ...

This paper delves into the heat dissipation characteristics of lithium-ion battery packs under various parameters of liquid cooling systems, employing a synergistic analysis ...
