In the present research, the performance of three commercial graphite felts (a 6 mm thick Rayon-based Sigracell<sup>®</sup>, a 4.6 mm thick PAN-based Sigracell<sup>®</sup>, and a 6 mm thick PAN ...

-NFS carbon is a very frustrating one especially since they never bothered to fix one of their little achievements. EA seem to just want their game out of the factory and be done with it, wait for ...

Redox flow batteries (RFBs) have emerged as promising candidates for large-scale energy storage due to their scalability and flexibility. However, the sluggish kinetics of ...

We report a novel electrode design based on sustainable fructose-derived porous carbon spheres (F-PCS) uniformly deposited on graphite felt (GF) through a simple ...
