To support large regions increasingly dependent on intermittent renewable energy, Stanford scientists are creating advances in fuel cells, hydrogen storage, flow batteries, and traditional ...

This project, selected through an international tender with six proposals, will be the largest energy storage system in Central America once operational by the end of 2025.

China's new 18.75MW/50.32MWh industrial park project [3] hints at the next frontier - AI-driven predictive storage. Using weather patterns and factory schedules, it pre-charges batteries 6 ...

This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future--from batteries to hydrogen, ...
