As a splicing fitting supplier, I've seen firsthand the importance of getting the installation of these fittings right in communication base stations. In this blog, I'll share some key installation ...

Base stations use antennas mounted on cell towers to send and receive radio signals to and from mobile devices within their coverage area. This communication enables ...

After the antenna receives the signal, it is passed through a series of high-frequency coaxial cables or waveguides to the BTS housed at the base of the tower. The BTS ...

Today, modular lithium-based energy storage systems have become the preferred solution for ensuring continuous operation, even ...
