What is a Bess system & how does it work?

For on-grid systems, the BESS can be deployed for a range of functions including: uninterruptible power supply, peak shaving, and voltage control. Beyond telecom infrastructure, these versatile BESS solutions can seamlessly address numerous power applications across various sectors, offering enhanced sustainability, efficiency and power continuity.

What is the Bess telecommunications pilot project?

The pilot project marks a significant milestone in the advancement of sustainable and efficient energy solutions for the telecommunications industry. The BESS unit, boasting a compact 28kWh capacity, offers a remarkably small footprint while delivering unmatched charge performance.

Can Bess improve off-grid diesel generation based cell tower power systems?

One of the most notable achievements identified during the testing of the BESS unit is its ability to enhance the efficiency of off-grid diesel generation-based cell tower power systems by exceeding a 60% reduction in diesel dependency.

Why should you choose Desten's Bess?

DESTEN's BESS is equipped with ultra-fast charging capacity. This feature enables the system to rapidly store excess energy during periods of low demand or through maximising the efficiency of on-site power systems, ensuring a seamless and sustainable power supply for both on-grid and off-grid cell towers.

Through extensive research and development, DESTEN and its partner, Hayat Communications, have designed a scalable solution ...

Through extensive research and development, DESTEN and its partner, Hayat Communications, have designed a scalable solution that addresses the energy demands of ...

Enter new energy solutions--from solar power and battery energy storage systems (BESS) to hydrogen fuel cells and AI-driven optimization. These innovations are reducing ...

With uninterruptible DC power, a flexible and modular design, and a proven track record of 250 MW installed
