What happens if a solar system is approved by a utility?

The utility will evaluate the system design, its impact on grid reliability, and the safety of its operation. Approval typically results in an Interconnection Agreement, a formal document granting permission to operate (PTO). Without this agreement, a solar system cannot legally go live. Utility interconnection isn't just paperwork. It affects:

What happens if a solar system is not approved?

Approval typically results in an Interconnection Agreement, a formal document granting permission to operate (PTO). Without this agreement, a solar system cannot legally go live. Utility interconnection isn't just paperwork. It affects: Project Timelines: Delays in approval can push back commissioning dates by weeks or months.

What happens if a solar array is not approved?

Without the approval and coordination of the local utility, even a fully built solar array cannot begin producing power for the grid or a private facility. The process can be complex, time-sensitive, and filled with regulatory requirements, so it's important for developers and facility owners to understand the path to successful interconnection.

NLR provides information and resources to U.S. states and communities on interconnection standards--how energy systems can be legally connected to the electricity grid.

The interconnection agreement for solar outlines the technical, safety, and regulatory conditions for connecting a PV system to ...

All shipping container solar systems must comply with local building and electrical codes. This includes proper grounding, GFCI protection, and the use of UL-listed components.

Whether the system is designed to feed electricity back into the grid (grid-tied), support on-site loads, or operate as a hybrid with battery storage, it must be reviewed and approved by the ...
