Can heavy solar equipment be delivered in a shipping container?

Heavy solar equipment can't always be delivered in a standard shipping van or shipping container, it's at risk of being damaged during transit, and it needs to arrive onsite according to energy project timelines. Effective supply chain management requires top-notch renewable energy logistics.

How do solar panels get shipped?

Solar panels, such as those manufactured in Taiwan, are typically shipped via ocean freight to Long Beach, California. Subsequently, they may be transported via full truckload shipping to a distributor's warehouse in Miami, Florida. Large solar panels, like those used on solar farms, might require oversize freight shipping services.

How do I ship solar panels overseas?

Ocean freight is typically the most cost-effective way to ship solar products overseas, while air freight is usually a faster option for projects with strict deadlines. Once a solar panel shipment arrives at the destination country, it can be moved inland through a variety of intermodal transport methods.

How many solar panels can a truckload hold?

A full truckload shipment can hold approximately 780 solar panels, given that 30 solar panels can be loaded on a standard pallet and a truckload can hold about 26 pallets.
