Major commercial projects now deploy clusters of 15+ systems creating storage networks with 80+MWh capacity at costs below \$270/kWh for large-scale industrial applications.

With the large-scale integration of renewable energy, output variability and uncertainty in distribution networks increase significantly, posing risks such as overvoltage, line overloads, ...

Research has shown the effective use of storage technologies to support the operation of a network with a large share of renewable sources of energy. This is done by ...

This paper presents a novel approach to addressing the challenges associated with energy storage capacity allocation in high ...
