Offshore substations (OSS) are hubs for the collection, transformation and transmission of electricity produced by offshore wind turbines. These structures convert ...

The onshore substation is often the first part of the wind farm to be built, about a year before offshore construction. In some cases, work may start ...

The power from each wind turbine travels through cables to an onshore substation. Here the voltage is adjusted so the electricity can be fed into the grid and distributed via power lines to ...

An offshore substation (OSS) is a critical component of wind farms, acting as the central hub for processing and conditioning electrical output from wind turbines for efficient ...
