---

EVs themselves are essentially mobile energy storage units, and their charging and discharging can be optimized through feedback systems. EV charging infrastructure can ...

Meanwhile, a nonlinear feedback control (FLC) is adopted to achieve smooth and fast-tracking performance, and a rule-based strategy (RBS) is applied for power demand ...

With the development of urban rail transit, the energy consumption and carbon emissions of subway operation are increasing. How to reduce the energy consumption.

Battery Energy Storage Systems (BESS) are increasingly described as a cornerstone of modern energy infrastructure. However, many discussions still reduce BESS to a simple ...
