---

In this study, a novel negative-stiffness amplification system-strengthened isolation system (NSAS-IS) is constructed for seismic performance upgrading of containment structures.

The report presents a performance-based approach to implement a seismic base isolation system for a reactor building and presents sample calculations for several systems to ...

Guidance is provided on the specification of seismic isolation systems and their commercial grade dedication. Seismic isolation offers significant improvements to building and equipment ...

Seismic isolation and energy dissipation systems are viable design strategies that have already been used for seismic rehabilitation of a number of buildings.
