---

The iron-chromium (FeCr) redox flow battery (RFB) was among the first flow batteries to be investigated because of the low cost of the electrolyte and the 1.2 V cell ...

Iron-Chromium Flow Batteries are safer, scalable and cost-effective. Discover why this original NASA-era innovation is poised to lead the LDES market today.

The aim of this collaborative project is to perform research and development on a FeCr-based redox flow battery (FeCrRFB) with rebalancing (RBC) system using a low-cost mining ...

The Fe-Cr flow battery (ICFB), which is regarded as the first generation of real FB, employs widely available and cost-effective ...
