---

Flywheel energy storage systems have gained increased popularity as a method of environmentally friendly energy storage. Fly wheels store energy in mechanical rotational ...

In a flywheel energy storage system, electrical energy is used to spin a flywheel at incredibly high speeds. The flywheel, made of durable materials like composite carbon fiber, stores energy in ...

Unsurpassed experience designing and deploying flywheel energy storage systems. Cumulative global flywheel operational runtime hours. Over 2.01 GWh discharged to date.

Flywheel energy storage (FES) works by spinning a rotor (flywheel) and maintaining the energy in the system as rotational energy. When energy is extracted from the system, the flywheel's ...
