This formula allows you to determine the exact number of cells you need based on your specific voltage and capacity needs, simplifying the design of the battery pack.

If each cell is 10 amp hours and 3.3 volts, the battery pack above would be 10 amp hours and 26.4 volts (3.3 volts x 8 cells). For this setup, a BMS capable of monitoring 8 cells in series is ...

The ideal voltage for a lithium-ion battery depends on its state of charge and specific chemistry. For a typical lithium-ion cell, the ideal voltage when fully charged is about ...

Generally, Lithium batteries have an optimal DOD of 80 to 100%, and Lead-Acid batteries an optimal DOD of 30 to 50%.
