How much power does a 5G station use?

The power consumption of a single 5G station is 2.5 to 3.5 times higher than that of a single 4G station. The main factor behind this increase in 5G power consumption is the high power usage of the active antenna unit (AAU). Under a full workload, a single station uses nearly 3700W.

Why does 5G use more power than 4G?

The data here all comes from operators on the front lines, and we can draw the following valuable conclusions: The power consumption of a single 5G station is 2.5 to 3.5 times higher than that of a single 4G station. The main factor behind this increase in 5G power consumption is the high power usage of the active antenna unit (AAU).

Should power consumption models be used in 5G networks?

This restricts the potential use of the power models, as their validity and accuracy remain unclear. Future work includes the further development of the power consumption models to form a unified evaluation framework that enables the quantification and optimization of energy consumption and energy efficiency of 5G networks.

What is a 5G base station?

A 5G base station is mainly composed of the baseband unit (BBU) and the AAU -- in 4G terms, the AAU is the remote radio unit (RRU) plus antenna. The role of the BBU is to handle baseband digital signal processing, while the AAU converts the baseband digital signal into an analog signal, and then modulates it into a high-frequency radio signal.

The rise of 5G technology brings faster speeds and lower latency, but it also raises questions about its energy consumption. As 5G networks are rolled out across the globe, it is important ...

Learn how much power 5G networks consume and understand how you can reduce RAN energy use. Does Open Ran Save Energy? The Information and Communication Technology (ICT) ...

To understand this, we need to look closer at the base station power consumption characteristics (Figure 3). The model shows that there is significant energy consumption in the ...

The 5G base station battery is a key component that provides backup power for base station equipment in the 5G communication network, ensuring that the base station can continue to ...
