What is the difference between upgm 202 & upgm 203?

UPGM-202: Good mechanical and electrical properties, good mechanical performance at moderate temperatures, good flame and fire resistance. UPGM-203: Similar to UPGM-202 but with improved arc and tracking resistance, for mechanical and electrical applications, meet UL 94 V-0 and EN45545 standard.

UPGM-204:

What is upgm 205?

UPGM-205: Thermal class H, TI 188 & #176; C certificated by CEMT. Well suited for mechanical and electrical applications, excellent mechanical and electrical strength at room temperatures, excellent heat resistance, good performance against arc and tracking, toxic-free, flame resistant, low smoke, meet EN45545 standard

What is upgm (unsaturated polyester glass mat)?

UPGM (Unsaturated Polyester Glass Mat) is rigid insulation material made by alkali-free glass mat impregnated in unsaturated polyester resin and additives, cured by heat and pressure.

What are upgm sheets used for?

In the automotive and rail industries, UPGM sheets are used for components that require both structural integrity and insulation properties, such as under-the-hood components and interior panels. 1 Industrial Equipment:

Summary: The UPGM203 electrical polyester board plays a vital role in modern inverter cabinet design, offering exceptional insulation and thermal stability. This article explores its industry ...

Processing actions: To begin with, use the scale milling cutter to procedure, according to the distinct precision demands, use the processing precision to carry on the finishing.

Unsaturation Polyester Glass Mat Laminated Sheet (UPGM203, NEMA GPO3) is made of several layers glass mat impregnated with unsaturation polyester resin by processing under heat and ...

Since 2002, we have focused on producing UPGM203 sheet (also known as GPO-3 sheet). We are a reputable firm that combines the production of ...
