---

o World needs around 3.4 TW/year of Photovoltaic (PV) to fight climate change. o Antimony (Sb) is used in PV glass to enhance glass transparency and quality. o Existing supply of Sb is ...

This article explores a new process for extracting valuable antimony from the glass of solar panels, aimed at solving disposal challenges in the 2030s.

However, glass manufacturers have been hard at work since then trying to eliminate antimony from solar glasses where it is considered necessary to use it. This article examines the ...

In traditional solar glass manufacturing, antimony improves refining, prevents oxidation of iron ions, resulting in higher transmittance and fewer defects. However, the global ...
