When sunlight hits the panels, they generate DC electricity, and the inverter's job is to convert this into AC electricity that can seamlessly power your home.

Probably not. If you have solar and the power goes out, your power will go out, too--unless you have a backup system. This is because U.S. electrical code requires rapid shutdown of a solar ...

That's where an inverter comes in. An inverter is an essential part of any solar PV system. It converts DC electricity into AC electricity so that it can power a home or business. In this ...

While it's the solar panels that convert sunlight into electricity, you wouldn't be able to use that energy without a solar inverter. That ...
