Jordan has significant wind energy resources that could be potentially exploited for power generation where the annual average wind speed exceeds 7 m/s (at 10 m height) in some ...

“With current generation capacity exceeding demand by approximately 45 percent 6 megawatts of generation against 4 megawatts of load energy storage has become imperative for maintaining ...

Due to the low energy demand during peak power generation, 17% of overall wind energy capacity is curtailed in Jordan. In this study, several energy storage systems are ...

In this study, the technical and economic feasibility of employing pumped hydroelectric energy storage (PHES) systems at potential locations in Jordan is investigated.
