Low Iron and Solar IGT maintains an extensive inventory of low iron (water white) glass intended for applications that require a high transmission ...

Low iron solar glass is a specialized type of glass designed to maximize sunlight transmission for solar panels. Unlike traditional glass, it contains minimal iron content, which...

Patterned glass with low iron content (iron oxide levels below 0.02%) enhances light transmission by reducing absorption, improving module efficiency by 2-4% compared to conventional glass.

Low-iron glass is a high-transparency material used in solar panels that contains significantly reduced iron content compared to standard glass, resulting in enhanced light transmission and ...
