Will energy storage deployment grow in 2025?

Storage deployment in the United States grew across all segments and is forecast to grow another 25% in 2025, according to Wood Mackenzie. Across all segments, including residential, commercial and industrial, and utility-scale, energy storage had year-over-year deployment growth in 2024.

How many GW of energy storage are there in 2024?

According to the Q1 2025 US Energy Storage Monitor from Wood Mackenzie and the ACP, energy storage installations surpassed 12GW in 2024.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

Which states have the most energy storage capacity?

California, Texas, Arizona, Nevada and Florida are the top five markets for cumulative operating energy storage capacity, according to ACP's Q2 report. Utility-scale battery storage projects are operational in 43 states, and 12 states have more than 100 MW of operating utility-scale storage capacity as of June 30, ACP said.

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

US energy storage market added more than 2 GW across all segments in Q1 2025. Despite a q-o-q decrease in storage installations, Q1 2025 new additions are the highest ...

While New York and Massachusetts each had down quarters, this near-term result is attributable to the CCI segment's low quarterly number of installations and will likely be ...

"Energy storage has entered a new phase of growth with its first year of double-digit deployment. We are increasingly seeing the industry's growth diversified across ...
