---

A team at the Department of Energy's Pacific Northwest National Laboratory (PNNL) has created a new battery design using an ordinary chemical used in water treatment facilities.

Iron-based flow batteries, designed for grid-scale energy storage, have also seen recent advancements. Researchers at Pacific Northwest National Laboratory (PNNL) have ...

Researchers are exploring iron-based batteries as a sustainable alternative to lithium-ion for energy storage.

A new iron-based aqueous flow battery shows promise for grid energy storage applications.
