How many schools currently use solar energy?

Nearly 5,500 schools currently use solar energy systems. This number will continue to grow rapidly as solar panel efficiencies improve and manufacturing costs decline.

What is the cost of solar?

The cost of solar varies by state and incentive programs, but the general cost of a system can range from \$1.75 to \$2.75 per watt installed. The recent decline in installation prices, along with increasing electricity costs, can make solar one of the most cost-effective ways to save energy.

Why is solar power successful in K-12 schools?

A fundamental reason for solar power's success in K-12 schools is the wide range of benefits offered to stakeholders. Nearly 5,500 schools currently use solar energy systems and that number will continue a rapid ascent as solar panel efficiencies improve and manufacturing costs decline.

Why is solar power becoming more cost-effective?

Solar power is becoming more cost-effective due to the recent decline in installation prices. Along with increasing electricity costs, this makes solar one of the most cost-effective ways to save energy.

In this article, we'll explore how solar helps schools cut costs, the environmental benefits it provides, and why it's a smart, forward-thinking choice for any school.

The cost per watt of solar for schools has dropped by over 70% in the last decade, falling below \$1.50 per watt in 2023. This price ...

Deploys solar + energy storage on all or most schools in the State. Reduces school operating costs, creating resources for teachers and students. Secures IRA tax credits to fund 30%, ...

The recent decline in installation prices, along with increasing electricity costs, can make solar power options one of the most cost ...
