---

The ultra-clear quality of the glass maximizes sunlight transmission, thereby improving the efficiency of solar panels integrated with embossed surfaces.

In this paper, a flexible and novel material interface design and manufacturing method for hierarchical macro/nano optical glass lenses is proposed.

This chapter examines the fundamental role of glass materials in photovoltaic (PV) technologies, emphasizing their structural, optical, and spectral conversion properties that ...

For semi-finished embossed glass products, the specially designed patterns on the glass surface help solar cells absorb sunlight ...
