Solar thermal systems use a heat transfer fluid (HTF) such as molten salt, synthetic oil, or other liquids to collect heat from sunlight. This ...

Active solar water heating systems usually have a tank for storing solar-heated water. Solar energy systems that heat water or air in buildings usually have non-concentrating ...

Learn how solar thermal collectors capture and convert solar energy into heat for a variety of uses, including heating, electricity, and more.

Our tanks are specifically designed to work in closed-loop solar thermal systems, where heat transfer fluid circulates between solar collectors and the tank, without mixing with the water ...
