They largely consist of silicon dioxide (silica,  $\text{SiO}_2$ ), but in contrast to pure silica glass (fused silica) they contain some additional substances like ...

They largely consist of silicon dioxide (silica,  $\text{SiO}_2$ ), but in contrast to pure silica glass (fused silica) they contain some additional substances like soda, alumina, phosphorus pentoxide, ...

Ion-exchange processing has been used to improve the mechanical properties of many specialty glass compositions. But its potential for similar use with commercial-grade soda-lime-silica ...

Studies on UV/Visible Absorption and IR Transmission Characteristics of  $\text{Cu}^{2+}$  Ion in a Soda-Magnesia-Lime-Silica Glass for Solar Application
