The Salt River Project is exploring the option to convert a portion of the Coronado Generating Station in St. Johns into a cutting edge energy storage system for power generated

Coronado generating station (CGS), owned and operated by Salt River Project (SRP), is a 773MW coal-fired power station located near St. Johns, Arizona, US.

SRP is seeking a non-lithium-ion, non-inverter based LDES technology as a pilot at its coal-fired Coronado Generating Station (CGS) ...

SRP is also pursuing additional near-term resource technology options, including a long duration energy storage pilot, that can be deployed at the CGS site alongside the converted boilers.
