In this paper, a refined (MPC) paradigm for a (3L-NPC) inverter is introduced to mitigate computational demands.

The three-level NPC PWM inverter is a type of multilevel inverter that provides a higher quality of output wave form compared to traditional two-level inverter.

In this study, a new current control method consisting of proportional-resonant (PR) based artificial neural networks (ANN) has been developed for a neutral point clamped (NPC) ...

The NXH600N105H7F5S2HG/P2HG is a power module in F5BP package containing an I-type neutral point clamped three-level inverter. The integrated field stop trench ...
