Why is it important to cut power on overhead cranes & hoists?

For safety, it is crucial for personnel to be able to cut the power on overhead cranes and hoists during operation--independently of the operating controls--in the event of an emergency or during a maintenance session.

How do I determine the correct stop category for an emergency stop?

To determine the correct Stop category for an emergency stop, a risk assessment of the machine must be carried out. A risk assessment is also used to determine whether an emergency stop is required. Get every important blog post or new information Eaton publishes for machine and system builders.

Can you use a fire extinguisher if a power supply is cut?

In case of an electrical fire, you should only use a fire extinguisher rated Class-C. If the power supply has been cut, you can use a water-based fire extinguisher, Class A.

Can a power supply unit be destroyed if polarity is reversed?

Use caution when connecting the input cable to the Power Supply. The Power Supply Unit may be destroyed if the input cable is connected to the wrong terminals. Use caution when using a model with a DC input. The Power Supply Unit may be destroyed if the polarity is reversed.

If no suppression system is installed, shut off the power supply and use a Class C fire extinguishing agent. Simply turning off the A/C power may not extinguish the fire.

Cut the Power Supply: The first thing to do in case of an electrical fire is to cut the power supply at the source. Flip the switch on your home's circuit ...

While the emergency switch-off convinces with a complete disruption of power supply, the emergency-stop ensures a safe stopping of the machine without loss of power supply.

Instead, turn off the power supply to the area if possible or remove the source of electricity using a non-conductive object. Immediately seek medical ...
