---

Geothermal power plants draw fluids from underground reservoirs to the surface to produce heated material. This steam or hot liquid then drives turbines that generate electricity before it ...

An underground power station is a type of hydroelectric power facility constructed by excavating its primary components--such as the machine hall, penstocks, and tailrace--directly into ...

Located in Lewiston, NY, 4.5 miles downstream from Niagara Falls, the Niagara Power Project uses a gated tunnel under the City of Niagara to divert water from the Niagara River into two ...

The most common underground power plants are hydropower plants. Hydropower plants use the potential energy of water to drive a water wheel or turbine and generate electricity.
