---

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

Isolating signals is not enough to provide true isolation from noise and high voltages - the power supplies need to be isolated too. Designing an isolated power supply is often something that ...

The TIDA-00711 design is a compact, low-cost, high-efficiency, dual output, 50-W, isolated DC-DC converter solution designed for use in uninterruptible power supplies (UPS), energy ...

In a UPS system, isolation transformers transfer AC current to connected equipment while isolating them from the power source. This protects ...
