Learn why UPS systems induce Power harmonics and discover effective solutions to mitigate its impacts on input power sources.

A complete guide to understanding, measuring, and eliminating the harmonic distortion that degrades electrical power quality.

Uninterruptible power supplies (UPS) provide continuous, reliable backup power when the main power supply fails. A double-conversion UPS converts input AC power to DC, and then back ...

A "clean" rectifier of the PFC (Power Factor Correction using control electronics) type that does not draw harmonics. In this case (without a filter), THDI drops to under 3%.
