It is crucial to develop green and clean energy storage devices to address increasing serious environmental issues and promote low-carbon, environmentally friendly, and sustainable ...

Herein, a simple hydrothermal process has been proposed for obtaining a vanadium diselenide cathode for an AZIB. The interaction of defects and crystal planes ...

Herein, a simple hydrothermal process has been proposed for obtaining a vanadium diselenide cathode for an AZIB. The interaction of defects and crystal planes enhances zinc storage ...

Herein, we demonstrate that layered VSe₂ with a large interlayer spacing could exhibit excellent Zn storage behavior. Even with a micro-sized morphology, it exhibits a high specific reversible ...
