---

Wrong base station identification codes indicate either an error in base station settings, faulty base station equipment, or an issue with overlapping coverage from adjacent cells.

Check whether there are important alarms and restore them, and check whether the time slot configuration and frame offset parameter settings of this station and surrounding base stations ...

As 6G standardization progresses, the industry faces a critical choice: continue patching existing architectures or reinvent base station resilience from the ground up.

To do this, hookup to a Rx test port, or the Rx antenna, for the affected sector and make measurements when calls are not up. Look first for a high received Rx noise floor by using the ...
